Stainless Steel St St Flanges

Flanges are used as a method of joining pipes and tubes where access/disassembly may be required.

There are a number of Flange specifications commonly used in the UK as shown attached.

REVISION HISTORY

Datasheet Updated 18 July 2019

DISCLAIMER

This Data is indicative only and as such is not to be relied upon in place of the full specification. In particular, mechanical property requirements vary widely with temper, product and product dimensions. All information is based on our present knowledge and is given in good faith. No liability will be accepted by the Company in respect of any action taken by any third party in reliance thereon.

Please note that the 'Datasheet Update' date shown above is no guarantee of accuracy or whether the datasheet is up to date.

The information provided in this datasheet has been drawn from various recognised sources, including EN Standards, recognised industry references (printed & online) and $\,$ manufacturers' data. No guarantee is given that the information is from the latest issue of those sources or about the accuracy of those sources.

Material supplied by the Company may vary significantly from this data, but will conform to all relevant and applicable standards.

As the products detailed may be used for a wide variety of purposes and as the Company has no control over their use; the Company specifically excludes all conditions or warranties expressed or implied by statute or otherwise as to dimensions, properties and/or fitness for any particular purpose, whether expressed or implied.

Advice given by the Company to any third party is given for that party's $% \left(1\right) =\left(1\right) \left(1\right) \left$ assistance only and without liability on the part of the Company. All transactions are subject to the Company's current Conditions of Sale. The extent of the Company's liabilities to any customer is clearly set out in those Conditions; a copy of which is available on request.

Introduction

| Туре | Jointing Method | General Description |
|------------------|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Weld Neck | Weld B Weld Neck | Used in critical applications. These are circumferentially welded onto the system at their necks which means that the integrity of the butt-welded area can easily be examined by X-ray radiography. The bores of both pipe and flange match thus reducing turbulence and erosion. |
| Slip On | Weld Slip On | This is slipped over the pipe and then fillet welded. Easy to use in fabricated applications. |
| Blind | Pipe Weld Blind Stud Bolt Blind | Sometimes called a blanking flange, this is used for blanking off pipelines, valves and pumps and as an inspection cover. |
| Socket Weld | Socket Weld | This is counter-bored to accept the pipe, which is then fillet welded. The bore of both the pipe and the flange are the same to ensure good flows. |
| Screwed/Threaded | Threaded Threaded | This requires no welding and is used to connect other threaded components in low pressure noncritical applications. |
| Lap Joint | Pipe Weld Lap Joint Stub | These are always used with either a stub end or a taft which is butt-welded to the pipe with the flange loose behind it. Thus the stub end or the taft always provides the sealing face. Easily assembled and aligned, it is favoured in low pressure applications. To reduce cost these 'backing' flanges can be supplied without a hub and/or made from coated carbon steel. |
| Ring Type Joint | Ring Pipe Ring Type Joint | This can be employed on Weld Neck, Slip On or Blind Flanges for leak-proof connection at high pressures. The seal is made by a metal ring being compressed into a hexagonal groove on the flange face. |

Introduction

General Description Plate or Table (BS 10:1962) These are produced to suit Nominal Bore/NPS Pipe Sizes. They are produced from bar or plate rather than forgings and are not Standard BS10 Flanges pressure-rated. Blind and Slip-On, flat-faced, types are readily available in grades 304L and 316L in sizes from $\frac{1}{2}$ to $\frac{1}{2}$ as Table D and Table E, with larger sizes and |-Eother Tables (thicknesses) made to order. These economical flanges are used for light-duty applications where corrosion resistance is the primary consideration rather than high pressure or temperature. Slip-on BS EN 1092 Part 1 These are not interchangeable with ANSI Flanges. They are readily available in types 304L and 316L with various pressure ratings of which 10 Bar & 16 Bar are the most commonly used. Also referred to as PN Flanges (Formerly BS4504) Metric ND/DN Please refer to information about the Metric ND product range in section 7. Hygienic Please refer to information about the Hygienics product range in section 6.

Flange faces

Of the four choices available the most common configurations are:

- o For ANSI and BS EN 1092 Raised Face
- BS 10 Flat Face.

Note that this does not apply to Screwed or Lap Joint Flanges.

| Туре | General Description |
|----------------------------------|---------------------------------------------|
| Raised Face | To facilitate welding |
| Flat Face | |
| Ring Type Joint (RJT) | For leak-proof connection at high pressures |
| Tongue & Groove - Small or Large | |

Finish

The finish is given as a surface roughness measured as Arithmetic Average Roundness Height (AARH). The finish requirements are stipulated by the standards, such as ANSI B16.5 and are within the range 125AARH to 500AARH, which is equivalent to 3.2 to 12.5 Ra.

Flanges Introduction

Pressure ratings

(The pressure rating will also determine the dimensions of the flange – Full details can be found in the relevant specification.)

| Flange Type | ANSI B16.5 | ANSI B16.47 Series A MSS SP-44 | ASME B16.47 Series B API 605 | BS EN 1092/ (BS4504) |
|---------------------------|------------|--------------------------------------|------------------------------------|-------------------------|
| | lbs | lbs* | lbs* | Bar |
| Weld Neck | 150-2500 | 150-900 | 150-300 | 2.5-40 |
| Weld Neck Ring Type Joint | 300-2500 | 300-900 | 150-300 | N/A |
| Slip On | 150-1500 | === | = | 2.5-40 |
| Slip On Ring Type Joint | 300-1500 | 54 | =4 | N/A |
| Threaded | 150-2500 | Ξ | E | 6-40 |
| Lap Joint | 150-2500 | 8 | = | 6-40 |
| Blind | 150-2500 | 20 | 29 | 2.5-40 |
| Socket Weld | 150-1500 | - | 21 | N/A |

What semi-finished product are flanges made from?

| | Forging A182 | Plate ASTM A240 | Bar | Casting |
|---------------------|--------------|-----------------|-----|---------|
| ANSI B16.5 | 1 | 1 | =1 | - |
| BS 3293 | 1 | - | w | ₽: |
| MSS SP-44 | 1 | -: | | =: |
| API 605 | 1 | | W1 | - |
| BS EN 1092/(BS4504) | 1 | 1 | =1 | 1 |
| BS 10 | 1 | 1 | 1 | 1 |

- Notes

 ASTM A240 plate can be used to manufacture ANSI B16.5 blind flanges, but this is not generally accepted in the UK.

 Most small BS 10 flanges are normally made from bar as this is the most economical manufacturing process.

Notes
* Flange sizes 26" and above.

Range/Sizes - Weld Neck Flanges - ANSI B16.5

- Notes

 Dimension B corresponds to the pipe inside diameter. Values quoted assume 40S/Standard wall thickness.

 Weights are based on manufacturer's data and are approximate.

 Flat face flanges may be provided at full thickness, C, or with raised face removed (the latter is nonstandard).

 For tolerances see page 5-12.

- Notes

 Dimension B corresponds to the pipe inside diameter. Values quoted assume 40S/Standard wall thickness.

 Weights are based on manufacturer's data and are approximate.

 Flat face flanges may be provided at full thickness, C, or with raised face removed (the latter is nonstandard).

 For tolerances see page 5-12.

- Notes

 Weights are based on manufacturer's data and are approximate.

 Flat face flanges may be provided at full thickness, C, or with raised face removed (the latter is nonstandard).

 For tolerances see page 5-12.

Specifications - ASTM A182/A182M

Forged or rolled alloy - steel pipe flanges, forged fittings, and valves and parts for high temperature service

This specification covers forged low alloy and stainless steel piping components for use in pressure systems. These include flanges, fittings, valves and similar parts manufactured to dimensional standards such as ASME/ANSI. Products made to this specification are limited to a maximum weight of 10,000 lb (4,540 kg).

Note
- Although low allow steels are covered by this standard, only stainless steels (martensitic, ferritic, austenitic and duplex) are included in this summary.

Dimensions and tolerances

ODIMensions and tolerances. ASME/ANSI specifications B16.5 and B16.11 are referenced. Flange dimensions and tolerances (see page 5-12).

Manufacture

- Materials. Refer to chemical composition table (stainless steel grades only shown). Elements not specified in the table are not permitted, specifically selenium or other elements added for free-machining properties.
- The steel may be melted by electric-furnace, or vacuum-furnace, or by either of these followed by vacuum or electroslag-consumable remelting. Vacuum melting or remelting is not suitable for grades containing or modified by nitrogen. Grade F XM-27Cb may be electron-beam melted.
- Manufacture. The steel is forged or rolled as near as possible to size and shape of the product. Small cylindrical parts (excluding flanges) may be machined directly from forged or rolled bar without additional hot working (limits defined in ASTM A234 apply for martensitic steels, in A403 for austenitic steels and A815 for duplex steels). Elbows, returns and tees are not machined directly from bar
- Heat treatment. Refer to heat treatment table. Heat treatment of forgings may be performed before machining. For martensitic and ferritic grades, liquid quench followed by tempering is permitted, subject to purchaser agreement. Small cylindrical parts (excluding flanges) machined directly from forged or rolled austenitic steel may be furnished annealed to this specification with subsequent light cold drawing or straightening permitted.
- Marking. Each forging is marked with manufacturers name, heat number (or heat identification), designation of service rating, specification number, grade (e.g. F304) and size. Additionally: QT = Liquid quenched and tempered

W = Welded

WNS = Not post repair weld heat treated

Finish and repair

- Appearance. Forgings have a workmanlike finish and shall be free of scale, machining burns and injurous, imperfections (i.e. those that encroach on minimum wall thickness).
- O Defect repair by grinding or machining. The following may be removed:
 - Surface discontinuity as above.
 - Mechanical marks, abrasions or pits deeper than 1/46 in (1.6mm)
- Defect repair by welding:
 - Permitted unless purchaser prohibits.
 - Defect removal by chipping or grinding is verified by magnetic particle inspection.
 - \bullet Repair is limited to 10% of surface area and 331/3% of nominal wall thickness
 - Repair welding electrodes and post weld repair heat treatments are defined in A182 but are not detailed in this summary.

- Notes

 1 Determined by the 0.2% offset method. For ferritic steels only, the 0.5% extension-under-load method may also be used.

 2 For sections over 5 in. [130mm] in thickness, the minimum tensile strength shall be 70 ksi [485 MPa].

 3 For sections over 6 in. [130mm] in thickness, the minimum tensile strength shall be 65 ksi [450 MPa].

 4 Longitudinal. The transverse elongation shall be 25% in 2 in. or 50mm, min.

 5 Longitudinal. The transverse elongation shall be 25% in 2 in. or 50mm, min.

 6 For sections over 2 in. [50mm] in thickness, the minimum tensile strength shall be 109 ksi [750 MPa]; the minimum yield strength shall be 75 ksi [515 MPa].

 7 All = All austenitic grades as listed in the chemical composition table except as identified in this table.

5-11

Specifications - ASME/ANSI B16.5

American national standards ASME/ANSI B16.5 and B16.47 together cover pipe flanges up to NPS 60 (NPS 48 is the largest detailed in this summary). ASME/ANSI B16.47 covers two series of flanges, Series A which is equivalent to MSS SP-44 (the 1996 Edition of MSS SP-44 complies with B16.47 tolerances), and Series B which is equivalent to API 605 (API 605 is now cancelled).

Range/Sizes - EN 1092 / (BS4504)

BS4504 is now obsolete and has been replaced by EN 1092. However the dimensions and tolerances have not changed.

Flange types and methods of manufacture

| ISO EN | BS | Type of Flange and Collar | Forgeda | Cast | Made from flat products (plates) | Machined from rolled or forged bars and forged sectional steel | Bent and electric welded from bars, sectional steel or strip bode |
|-----------|-----|-----------------------------------|---------|------|----------------------------------------|-------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| 01 | 101 | Plate flange for welding | yes | no | yes | yes | yes |
| 05 | 105 | Blind flange | yes | no | yes | yes | no |
| 11 | 111 | Weld-neck flange | yes | no | no | yes | yes, for ≥ DN 700 |
| 12 | 112 | Hubbed slip-on flange for welding | yes | no | no | yes | no |

- a Seamless rolled, pressed, forged.

 b Only one radial weld is allowed under DN 1800.

 c Welded flanges allowed only for an application up to 370°C in conformance with EN 13480-3:2002, D.4.4.

 d In case flanges are made by cold forming of a base material e.g. flat product, some mechanical properties, like elongation after fracture (A) and impact energy (KV), will be impaired due to cold forming without subsequent heat treatment.

Repairs by welding

With the exception of weld repairs carried out according to BSEN 1092-1:2007 (E) clause 5.11, repairs by welding are permitted only by written agreement of the purchaser.

Within the certificate for material or component relevant documents shall be noted, that approved welding procedure and welders qualification have been applied.

Bolting

Flanges shall be suitable for use with the number and size of bolting as specified in the Tables on pages 5-14 to 5-18. The bolting shall be chosen by the equipment manufacturer according to the pressure, temperature, flange material and gasket so that the flanged joint remains tight under the expected operating conditions. For selection of bolting, see EN 1515-1, for combination of the materials of flanges and bolting see EN 1515-2, for information.

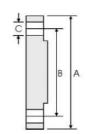

Gaskets

The various gasket types, dimensions, design characteristics and materials used are not within the scope of this European Standard, Dimensions of gaskets are given in the series of standards EN 1514.

- Notes

 Dimension B is the flange thickness with or without a raised face.

 For drilling details see page 6-14.

 For tolerances see page 5-19.

 For facing types and dimensions see page 5-20 and 6-21.

- Notes

 Dimension B is the range thickness with or without a raised face.

 Dimension C is the maximum diameter of the centre portion of a blank flange face which need not be machined.

 For drilling details see page 5-14.

 For tolerances see page 5-19.

 For facing types and dimensions see pages 5-20 and 5-21.

Specifications - EN 1092 (BS4504)

Flange facings

EN 1092 (BS4504) flange facing types A to H are defined below. The dimensions vary with pipe size (DN) and pressure rating (PN) as detailed in the table on page 5-21.

Specifications - EN 1092 (BS4504)

Range/Sizes/Specifications - BS10 Plate Flanges

British Standard BS 10: 1962 - Specification for Flanges and Bolting for Pipes, Valves, and Fittings. This covers plain, boss, integrally cast or forged, and welding neck type flanges, in ten tables. Although BS 10 is obsolescent, it remains in use for the dimensions of light duty, economy stainless steel flanges in applications where corrosion resistance and/or hygiene, rather than high pressures and temperatures, are the primary considerations. The following tables detail the applicable standard dimensions from Tables D, E, F and H of BS 10.

Flange dimensions based on tables D and E of BS 10: 1962

| Common | BS 10 Table D Dimensions | | | | | | BS 10 Table E Dimensions | | | | | | |
|---------------------------------------------------------|----------------------------------|---------------------|--------------------------------|-----------------------|-------------------------|----------------------------------|---------------------------|----------------------------|-----------------------|-------------------------|--|--|--|

Notes

- Bolt hole diameters are as follows:

For ½ in and ½ in bolts, the bolt hole shall be ½ in larger than the bolt diameter.

For ¾ in bolts and larger, the bolt hole shall be not more than ½ in larger than the bolt diameter.
